MANAGEMENT**

Ed Buckner

03-09-2023

Mr. Buckner-

I appreciate your 03-07-2023 email relative to ESE Alcohol. We are working on the revised sampling plan, hoping to meet your March 16, 2023 time frame. Due to us having to completely redevelop the number of samples we may not be able to meet this time frame.

Thank you for the agreement with the customary 30" depth for the agriculture industry. We are working with the LOEC table you provided, this will help our process. We are evaluating the worker exposure data. I would expect your split samples will be sent to a certified and validated laboratory under ISOI 7025 modified as the Matrix Laboratories are.

With the time constraint we will address the lagoon samples during a later sampling event. Due to the fact these areas are not agricultural, the human/worker exposer levels will apply.

We intend to only conduct sampling under the AOC after acceptance of the plan.

In the event you have any questions please contact my office.

Sincerely,

Terry D. Bobo, PCHMM, REM, CRM/EPA
President

for an environment we can all live with today & tomorrow
